How to Thrive in the Coming Cashless Society 8

Central Banks, Corporate Banks, Corporations and Governments have created a new Global Financial System and Global Payment System based on Blockchain Technology

Just over a year ago I released my second of three reports "[The Decentralized Cryptocurrency Nightmare](#)", as I wrote in the report I had said to my friend G. Edward Griffin "GEG, what governments, banks, and big business are doing with specifically blockchain technology is going to make what they did on Jekyll Island look like a walk in the park, this will literally enslave all of humanity, and they tricked libertarians and the decentralized cryptocurrency community into creating their control system for them".

My previous report have provided rock-solid evidence that **central banks, corporate banks, corporations and governments have created a new global financial system and global payment system based on blockchain technology utilizing central bank digital currencies (CBDC) and decentralized cryptocurrencies that are approved to be traded on central bank controlled cryptocurrency exchanges (such as Coinbase). CBDCs and decentralized cryptocurrencies will be utilized as money to purchase products and services.** And perhaps, the IMF will potentially utilize a digital currency that is tied to the SDR as the reserve currency of the world for countries to trade oil and other commodities, a company in China has already created such a blockchain and cryptocurrency that is tied to the IMF SDR.

In a recent article [In a Unprecedented, Shocking Proposal](#), former Bank of England Governor and current Circle CEO Mark Carney urged replacing the dollar with a Libra-Like Reserve Currency. Other statements made indicate we are going to a cashless society can be found on page 7 of [How to Thrive in the Coming Cashless Society](#) including statements made by the UN, and IMF's Christiane Lagarde, and Bill Gates who funds the UN Better than Cash Alliance, and Gary Cohn, the former chief operating officer of Goldman Sachs, who served as director of the National Economic Council and was the chief economic advisor to President Donald Trump, recently said: "**I do think we will have a global cryptocurrency...** ", the writing in on the wall.

Then take into consideration that since 2008 every central bank in the world has utilized Quantitative Easing (QE) aka digital money printing in the "many" trillions of dollars intentionally turning the entire world economy into a Ponzi scheme to the point where QE is forever eternal, at least under [Modern Economic Theory](#) where privately owned central banks are not constrained by revenues when it comes to federal government spending, where governments do not need taxes or borrowing for spending since they can digitally print (QE) as much as they need and are the monopoly issuers of the currency. Privately owned central banks then purchase government securities from the market to increase the money supply, then assign trillions in debt back onto the people, thereby intentionally enslaving citizens of countries, and now enslaving all the people of the world in unpayable debt.

The mainstream fake-news pundits control public perception and create confidence in the economy by consistently promoting how high and strong the stock market is, (look how high your 401K is, look here, do not look at the bond market) as if the stock market is the leading economic indicator of a strong economy, when the fact is [corporate stock buybacks](#) are one reason the stock market is artificially inflated. The mockingbird media also promotes how great the job numbers are, truth is if the US unemployment rate included everyone who says

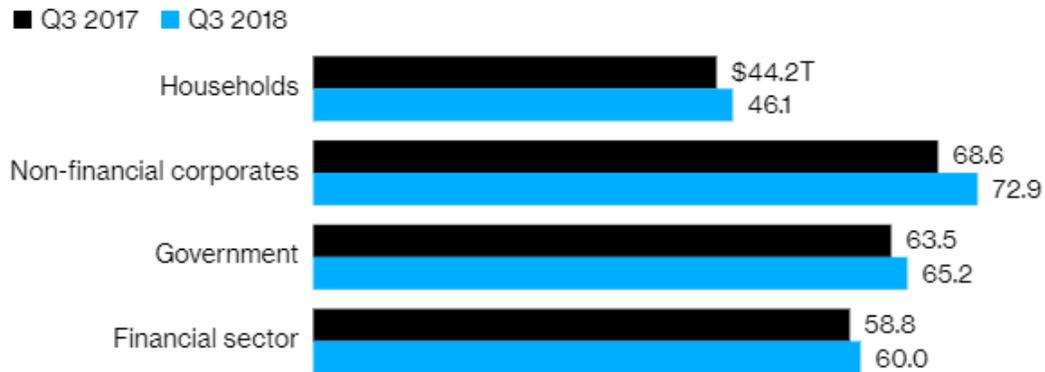

they want a job, the unemployment numbers would be nearly [double](#). Everything within the economy has been created to be deceptive and misleading, which only further strengthens the argument that the current world economic Ponzi scheme was intentionally created.

Then **take into consideration assortment of economic data listed below**, then ask yourself: was this economic disaster intentionally engineered to save the status quo, or, was it done to intentionally make the current financial system unsustainable to be replaced by a global financial system that my prior reports factually prove has already been put in place:

- [Federal Reserve QE 2008 to 2014](#)
- [Stock buybacks](#) are set to hit a record \$1 trillion this year
- Stock buybacks and Tech Are [Driving the 2019 Bull Market](#)
- [The Fed caused 93% of the entire stock market's move since 2008: Analysis](#) The S&P 500 doubled in value from November 2008 to October 2014, coinciding with the Federal Reserve Bank's "quantitative easing" asset purchasing program. After three rounds of "QE," where the Fed poured billions of dollars into the bond market monthly, the Fed's balance sheet went from \$2.1 trillion to \$4.5 trillion.
- As of August 19, 2019, [19 European countries](#) now have **negative interest rates**.
- [2 10 yield curve inverted](#) for first time in 12 years with the 30-year yield at an all-time low
- [Global Debt of \\$244 Trillion Nears Record Despite Faster Growth](#)
 - World debt exceeded 318% of GDP in the third quarter
 - Non-financial corporate debt nears record high of 92% of GDP
 - Total government debt exceeded \$65 trillion in 2018, up from \$37 trillion a decade ago, and rose faster in mature markets
 - Non-financial corporate debt rose to over \$72 trillion last year, now near an all-time high of 92 percent of GDP
 - Household debt grew by over 30 percent to \$46 trillion helped by strong growth in emerging markets, notably from China; though Czech Republic, India, Mexico, Korea, Malaysia, and Chile all recorded more than 20% increases since 2016
 - Financial sector indebtedness rose to about \$60 trillion, up 10 percent from a decade earlier
- Total public debt according to the globalists own website as of today [is above \\$62 Trillion](#)
- US corporate debt is [\\$15.5 trillion, 74% of US GDP](#)

Sectoral Debt

Overall, global debt has grown to \$244 trillion as of the third quarter of 2018

- Retail Apocalypse: [12,000 Stores Are Forecasted to Close This Year](#)
- US mortgage debt eclipses 2008 <https://www.wsj.com/articles/u-s-mortgage-debt-hits-record-eclipsing-2008-peak-11565708431>
- Empire State manufacturing index [posts largest-ever drop into negative territory in June](#)
- Jobs numbers are deceptive, if the US unemployment rate included everyone who says they want a job, [it would be nearly double](#)

All Intentional

Central bankers plan far in advance, they know that the debt they were intentionally accumulating would create the above results; therefore, it is intentional.

But why? Why would central banks and their handlers collapse the entire world financial system when they control every central bank in the world except for two. Why would they do this when they control the money supply of every country in the world and have more power and wealth than any could imagine?

One main reason is, as I have factually proved, **they have created a new global financial system in which they can track and tax 100% of all transactions made on their private supply blockchain system. All products and services have been standardized for the blockchain and tokenized and placed on their private supply blockchains and they also have technology that reads public blockchains.** CBDCs and approved decentralized cryptocurrencies will make transactions on their private blockchains which they have technology that can track and tax 100% of every transaction. There will be no paper money, there will be zero privacy. The USA will have a social credit score similar to China, if you go along with their tyranny you will be rewarded, if you speak out you will be penalized and ostracized. [Silicon Valley is building a Chinese-style social credit system](#) for the USA which scores citizens' behavior to government and social media policy.

Another main reason is this is one piece of the one-world government system based on [UN Agenda 21 / 2030](#). This new global financial system and global payment system based on blockchain technology utilizing central bank digital currencies (CBDC) and decentralized cryptocurrencies are intended to function within UN Agenda 2030 Smart Cities that have Smart Grids that contain the IoT (internet of things) that communicates with 5G in which the Smart Grids are managed by AI (artificial intelligence). The Smart Grids and IoT utilize blockchain technology and this new global financial system and global payment system is just part of the Global Smart Grid.

For nearly 2 years I have been explaining the world that a company that was formed by the New York Federal Reserve, now a private company called **Digital Currency Group (DCG) is controlled by the federal reserve**. Three of DCG BOD sat on the BOG of the Federal Reserve, including Larry Summers.

DCG controls Bitcoin by way of owning Blockstream, the core software development company for Bitcoin. AXA Strategic ventures also being a major investor in Blockstream, the CEO of AXA Strategic Ventures was also the long-term director of the Bilderberg Group.

DCG owns Circle (Mark Carney CEO, see page 1) and Circle owns Poloniex. **Circle owns USDC (US Dollar Coin) which has direct settlement to local bank accounts.**

DCG owns Coinbase, the largest cryptocurrency exchange in America. **Coinbase has essentially become the regulatory arm of the SEC** as they have approved over 40 decentralized cryptocurrencies to be traded on Coinbase and when doing so puts them through SEC regulations.

DCG has created a new global financial system and payment system based on blockchain technology and ISO.org has created standards for every product and service in the world which creates metadata. DCG OWNS TECHNOLOGY THAT READS PRIVATE AND PUBLIC BLOCKCHAINS. Every product and service in the world will be on private supply blockchains. Meaning they can track and tax 100% of every transaction because we will be in a global cashless society. It does not matter if you would utilize a privacy cryptocurrency like Monero or DASH, even if you are anonymous, you will still be taxed. Global carbon taxes can be assessed, or any type of value-added tax can be assessed. Currently in China, if you jaywalk the facial recognition recognizes and you and instantly deducts the fine from your bank account.

I theorize that negative interest rates would work well in a cashless society, they could get rid of the IRS and create a flat sales tax and force you to spend money via negative interest rates.

Let's take into consideration Agenda 21 / 2030, most people will live in Smart Cities that have Smart Grids with total surveillance that are connected to 5G that contain the IoT that is managed by AI. All homes will have smart meters and all products and appliances and clothing will have RFID tracking devices, all products and services will be on private or public blockchains that are tracked, there will be no paper money, there will be zero privacy. You will be forced to buy and sell on their global payment system. You may have a debit card, you will have your smart device, and they may require us all to have an RFID chip inserted into our bodies to buy and sell.

Solutions to Living Outside this new Financial System

UN Agenda 2030 and the new global blockchain financial system will enslave “most” of humanity, freedom-minded people must utilize options for living outside their beast system.

Are there solutions or alternatives to not participating in this new global blockchain financial system? Yes.

If we are going to be in a cashless society, there are several options to live outside of their new financial system:

1. Purchase small denominations of gold and silver
2. Buy and sell on private and decentralized local marketplaces that also have bartering
3. **Purchase a [Masternode](#) from any proof of stake cryptocurrency project that has the potential for long term success and is “not” approved to be traded on a central bank controlled cryptocurrency exchange. [Masternodes](#) pay you daily and have the potential to be very valuable. Only purchase cryptocurrencies that have a use case and will be utilized as money to purchase products and services outside of the beast system and have the technological approach as described in this report.** Only purchase cryptocurrencies that can be exposed to millions of people and be affordable and have super growth potential
4. Start local networks and start organic home gardens or community gardens. Food and water will be a vital resource in the near future, and you do not want to be dependent on the coming beast system

If we live in a cashless society, and if they are going to utilize technology and blockchain and cryptocurrency, we must create our own technology and private blockchain and cryptocurrencies that can be utilized in private and decentralized marketplaces.

Kent Lewiss, the author of this report invented a technological approach and developed this technological approach into the 1776 Token and the CTEAM Token and connected these cryptocurrencies to a private version of FreedomMarket and a decentralized version of FreedomMarket.

THE FOLLOWING TECHNOLOGICAL APPROACH **IS REQUIRED** FOR A CRYPTOCURRENCY TO CIRCUMVENT PRIVATE AND PUBLIC BLOCKCHAIN READERS:

1. Cryptocurrencies must be Proof of Stake. Proof of Work cryptocurrencies mining can be taken over and controlled by governments and/or special interest groups. An example is China controls 90% of Bitcoin mining. Proof of Stake has the miner built into the cryptocurrency wallet and requires next to zero resources. Proof of Stake allows its network to control the cryptocurrency.
2. Cryptocurrencies must provide obfuscation and a high level of anonymity.
3. Cryptocurrencies must have their own private blockchain that is built into the wallets. Any cryptocurrency that has a public blockchain can be read and tracked and taxed, no matter if you are using a cryptocurrency with obfuscation

How to Thrive in the Coming Cashless Society

And live outside of the Beast System

For a cryptocurrency to have long term success:

1. It must have a use case and be used as money: The 1776 Token and CTEAM Token will be used as money on the private and decentralized FreedomMarket, and all end users are paid in 1776 to post, like, share, view and refer on Freedom.social and FreedomTube.social
2. A Cryptocurrency must-have marketing and distribution and the potential to be exposed to millions of people:
 - a. The 1776 and CTEAM Token has the ability to be exposed to millions of people. on a regular basis at www.Freedom.social and www.FreedomTube.social
 - b. FreedomTube is similar to YouTube, however, we promote the truth while YouTube censors the truth
 - c. The completed however not launched www.Christian.team and www.ChristianTube.team and www.ChristianMarket.team will be marketed by Christian organizations worldwide and not marketed by our companies
3. Cryptocurrencies must be affordable with super growth potential
